I use Vim (vim-airline-theme) frequently on Ubuntu 14.04. One thing that I find irritating is that you can switch to vim by typing vi, but you can't switch to a specific file from within Vim. For example, I can easily cd.. from within Vim. So what I need is to be able to switch to a specific file from within Vim by typing something like vim foo.txt or jfo which will open the file with vim in the current directory. A: Simply type : in normal mode and you are taken to the file you selected (the last file you were editing) Alternatively, use :e which is the same as vim foo.txt (and use the same to get back) A: One simple approach is to: cd.. vim $(pwd) which (from inside vim) opens the file you were just editing sets the working directory to the directory you were working in A: Vim has an internal command for this. You can go to a directory by typing :e., for instance. You can get back to a file with the :help directory command. So for your example, you can type: :e. That will open up whatever file you were editing. TREY PARKER, the 17-year-old son of the NFL's Philadelphia Eagles' cornerback, is reportedly " 5b5f913d15
