CADs are design programs used for creating architectural, mechanical, electrical and other engineering drawings. In recent years, CAD software has become more widely available to home users as the number of desktop PCs sold increases. New CAD software packages are introduced regularly, while older packages are retired, and the number of CAD applications available to the general public and to hobbyists continues to grow. With the broadening adoption of CADs in homes, schools and offices, several types of CAD-related hobbyist projects are emerging, among them circuit board layout, building model construction, and robot and remote-controlled vehicle design. Use of CAD in the Home The vast majority of CAD hobbyists are laypersons. Many are architects, while others are hobbyists and home improvement enthusiasts. Some are dedicated hobbyists, while others are more or less just passing the time while waiting for something else to happen. Many of the CAD projects in this book are hobby-size projects. Many more are useful, practical projects for a limited number of people, such as a carpenter or contractor, or a building contractor, builder or architect. The projects in this book can be categorized into the following categories: Handy-Home Projects Building a simple model Restoring a home Carpentry, masonry and other home improvement projects Hobbyist Home Theater Design Model Rocketry Handy-Home Projects The following CAD projects are more or less large enough that they could potentially be done for a small to midsize home project, but they are often built in larger, multipurpose environments, such as garages, workshop and basements.
