The world of Seraphim is a world of fantasy and myth. Upon the land's surface, there appear pristine and natural beauty. However, beneath the surface lies the flesh of life, more complex than the world above. The Jwaising Kims are creatures with minds of dragons that traverse through this world, the Jwaising that has been tamed by the wicked Celullion. The elite in society created by the King and the powerful magic users known as Elden are all a result of the Celullion's influence. Those who possess certain powers are born from the Celullion's designs. While the origin is of the Celullion, the true process of its creation is shrouded in mystery. An interesting aspect of this world is that no one remembers the events of the time of the Celullion. A record of truth can be found only in the Stone of Danen, where the remains of its original nature are left with no sense of time. • UNLOCK THE SECRET OF THE WORLD OF SERAPHIM! There is much to be gained from that. • Choose Your Skills The game supports five different disciplines: Strength, Intelligence, Magic, Science and Spirit. The methods of these effects are unique to each discipline. • Interact with a variety of Characters In addition to the characters from the story, you can meet warriors, hunters, and good-luck spirits as you progress in the story. I have a couple of elements for which I want to automatically set their volume to whatever I set with Lame's -h switch. The problem is that I can't find a similar switch in javax.sound.sampled. I've tried using Sampler to load a LAME-encoded WAV file using javax.sound.sampled.WaveFileFormat as the outputFormat, but Lame returns -1323 when it encounters a WAV file, even though I've set file extension to .wav explicitly. A: I have no direct experience with the lame sound library, but I believe the problem is related to your use of the wave file format. The lame flags (-h) are only supported by v1.0 and later versions of lame. These flags are documented for WAV (the format the lame library has been developed to support) in the chunks "w flag" and "a flag" at or For WAV files produced by newer versions of lame this will still work just fine, but only older versions of lame understand the -h flag. Using the ChunkIterator is a good alternative. The wave format has also been improved over the years. A: There's really no equivalent of the -h LAME switch for Java. A javax.sound.sampled.AudioInputStream is read from a compressed file and automatically handled using the MIME type (I think that is how it works). If you have the WAV format, then you can tell the AudioInputStream to use the "C:" MIME type (from LAME) rather than the default. An enum constant from the AudioFormat class is the audioFormat.FILE_
