Later versions added multi-user functionality and support for two or more drawing areas. Also, the term CAD was used to describe a CAD program, and not the business of designing for manufacturing. CAD programs such as Cadquery (1988) and AutoCAD (1990) were powerful, but were not intended for real-world, manufacturing-oriented design. * * * * * * History of AutoCAD 1988 | Cadquery: a CAD program that was intended to help design parts and assemblies for a prototyping environment --- | --- 1990 | AutoCAD: a CAD program developed specifically for manufacturing 1991 | DrawingSuite: a combination of AutoCAD, AutoLISP, and AutoCAD R14, the first version of AutoCAD to support 2D drawing and 2D and 3D modeling 1992 | Interact: a multi-user, multiple drawing area CAD application for personal computers that ran on the Microsoft Windows operating system 1996 | AutoCAD Map 3D: a CAD program that supported site-specific, multi-object, multi-viewpoint, 3D construction 1997 | AutoCAD Xpress: a CAD program that ran on Microsoft Windows NT/2000/XP/2003 1998 | Autodesk AutoCAD Map Standard Edition: a CAD program that ran on the Windows 9x/Me/2000 operating system 1999 | AutoCAD Map Professional: a CAD program that ran on Windows NT/2000/XP/2003, and on the Mac operating system 2000 | AutoCAD Map Enterprise: a CAD program that ran on Windows NT/2000/XP/2003, and on the Mac operating system 2001 | AutoCAD Architecture: a CAD program that ran on the Windows operating system 2002 | AutoCAD Electrical: a CAD program that ran on the Windows operating system 2003 | AutoCAD LT: a CAD program that ran on the Windows operating system 2004 | AutoCAD 2005: a

Referencing objects The program uses the concept of objects and reference objects to allow multiple people to share drawing information. The information is stored in the form of metadata about the objects, and no copy of the actual drawing is required. In AutoCAD Full Crack 2010 there are two types of objects. Standard objects are normal objects that can be labeled, created and modified by users. Reference objects are objects that cannot be created and modified by users. This type of object is used as an identifier to other objects within AutoCAD. Reference objects are used to link a component or object to a location or project. References are stored within the drawing itself and are in the form of a.DAT file. The.DAT file has the.DAT extension and it can be found in the same folder as the drawing or on the disk drive from where it was created. There are several locations where references can be placed. The Drawing menu contains an Options menu for Reference Placement. If a drawing is opened for editing, a Reference toolbar is displayed in the toolbars as shown in the figure below. When a reference is created, the location where the reference should be placed is selected in the Reference Placement toolbar. Next, the reference number and number of copies of the reference that should be created are entered. The reference number can be a string that does not need to follow a pattern, or a valid number. After the reference has been created, the Reference buttons are set to a specific action. The buttons control the number of copies of the reference that are created. Intents Intents are the predefined way a person can perform a certain task in AutoCAD. Intents are used for drawing to create some parts of the design as well as for running macros. For example, a cutting task can be set up in the Drawings Menu or through the M command. Object-level security Object-level security refers to the ability to control access to drawings by restricting access to the objects contained within those drawings. This security can be set at the drawing level, the group level, or the individual object level. There is a similar function in Project 2010. Drawing templates Automation Studio allows users to create and edit drawing templates. A drawing template can contain a series of drawing components and can be edited by adding and deleting drawing components. When a template is activated, the drawing is opened in design mode and the drawing components are added to the drawing af5dca3d97
