Shanghai, China - China's central bank has unexpectedly raised interest rates for a fourth straight time, the latest in a series of moves that has triggered political controversy in the world's second-largest economy. Beijing's move to tighten financial conditions - the latest in an apparent policy of "gradualism" designed to prevent a financial crisis - comes amid deepening concern about China's economy, which is on the verge of recession. Despite the central bank's move to tighten its monetary policy, China's economy performed well in the first quarter, even as economists debate whether the economy has entered a period of structural change that will cause the economy to decelerate sharply or even enter a prolonged downturn. A number of economists have argued that what has largely driven the past decade of China's growth is the government's efforts to fix the economy after the 2008 global financial crisis. If that proves correct, then the central bank may be able to get by with lower interest rates, said Thomas Willis, a senior economist at the research firm Capital Economics. "The recent rise in policy rates is pretty clearly not motivated by the need to halt growth or prevent a financial crisis," said Willis. "It is
