When I only have a single range in the formula it runs without a problem. I have a feeling that my indexing is wrong, but I'm not sure how I would fix it. A: When you do Worksheets("Fas2").Range(Worksheets("Fas2").Cells(1, 1), Worksheets("Fas2").Cells(80, 2)).FormulaR1C1 you are implicitly concatenating two ranges which results in a Range object. But you have a FormulaR1C1 that you have to concatenate. That's why it gives you the error. Try this : Worksheets("Fas2").Range(Worksheets("Fas2").Cells(1, 1 c6a93da74d
